South African Employment Relations

In recent years, the question whether judges should defer to administrative decisions has attracted considerable interest amongst public lawyers throughout the common law world. This book examines how the common law of judicial review has responded to the development of the administrative state in three different common law jurisdictions – the United Kingdom, the United States of America and Canada – over the past 100 years. This comparison demonstrates that the idea of judicial deference is a valuable feature of modern administrative law, because it gives lawyers and judges practical guidance on how to negotiate the constitutional tension between the democratic legitimacy of the administrative state and the judicial role in maintaining the rule of law.

Textbook on Administrative Law

This book is a collection of papers presented at the 'Forum "Math-for-Industry" 2016' (FMfI2016), held at Queensland University of Technology, Brisbane, Australia, on November 21–23, 2016. The theme for this unique and important event was “Agriculture as a Metaphor for Creativity in All Human Endeavors”, and it brought together leading international mathematicians and active researchers from universities and industry to discuss current challenging topics and to promote interactive collaborations between mathematics and industry. The success of agricultural practice relies fundamentally on its interconnections with and dependence on biology and the environment. Both play essential roles, including the biological adaptation to cope with environmental challenges of biotic and abiotic stress and global warming. The book highlights the development of mathematics within this framework that successful agricultural practice depends upon and exploits.

ISBN 1-58477-498-3. Cloth. \$125. * The standard one-volume treatise based on classic legal-realist principles. This process is explored in its chapters on legality, mens rea, harm, causation, punishment, strict liability, ignorance and mistake, necessity and coercion, mental disease, intoxication and criminal attempt, as well as its general chapters on criminology, criminal theory and penal theory. Acclaimed when its first edition appeared in 1947, it has been cited regularly ever since.

New Entrepreneurial Law

Interpretation Of Statutes

The explosion of minimalism into the worlds of visual arts, music and literature in the mid-to-late twentieth century presents one of the most radical and decisive revolutions in aesthetic history. Detested by some, embraced by others, minimalism's influence was immediate, pervasive and lasting, significantly changing the way we hear music, see art and read literature. In *The Theory of Minimalism*, Marc Botha offers the first general theory of minimalism, equally applicable to literature, the visual arts and music. He argues that minimalism establishes an aesthetic paradigm for rethinking realism in genuinely radical terms. In dialogue with thinkers from both the analytic and continental traditions - including Kant, Danto, Agamben, Badiou and Meillassoux - Botha develops a constellation of concepts which together encapsulate the transhistorical and transdisciplinary reach of minimalism. Illustrated by a range of historical, canonical and contemporary minimalist works of different media, from the caves of early Christian ascetics to Samuel Beckett's late prose, Botha offers a bold and provocative argument which will equip readers with the tools to engage critically with past, present and future minimalism, and to recognize how, in a culture caught between the poles of excess and austerity, minimalism still matters.

Becoming a Teacher Educator is an impressive book for teacher educators who want to be informed about the latest views and practices of their profession. It is the first book that addresses a range of topics related to the work of teacher educators, the induction of teacher educators and their further professional development. Becoming a Teacher Educator has a practical focus and it provides theoretical insights, experiences of experts and practical recommendations. The book is rooted in the Association of Teacher Education in Europe (ATEE) and many

of the chapters are written by authors who are active members of the ATEE. Researchers and practitioners from different parts of Europe, and beyond, joined their efforts to write a book that is truly international and combines research, practice and reflection. *Becoming a Teacher Educator* is essential reading for novice teacher educators as well as for experienced teacher educators who want to keep up with the latest insights in their profession. This book provides a guide for those who supervise novice and experienced teacher educators and for various professionals who are responsible for the professional development of teacher educators. "There is a growing need for evidence-based resources made available to (future) teacher educators. Since a learning society requires new sets of competencies of the main actors, we are most in want of knowledgeable teacher educators that support the professional development of their (student) teachers. This book fits the actual demands." (Dr. Joost Lowyck, Professor Emeritus, former director of the Teacher Education Institute, Leuven University). "This is an original book in a very important area. The editors define the concept of 'teacher educator' widely and I think, therefore, that the book is relevant for schools, higher education, and education authorities of all kinds. The authorship and theme have wide relevance across Europe, Australasia and North America." (Prof. Bob Moon, Professor in Education Teaching Studies, Department of Education, Open University, UK). "The book highlights that, while the current global focus is very much on the need to educate "sufficient and highly qualified teachers", little political focus is given to those who "teach the teachers". What makes this book distinctive for all engaged in teacher education, whether experienced or novice, is that it allows the spotlight on those who teach the teachers and the opportunity for teacher educators to discuss, debate and seriously examine themselves as a profession." (Simone White, Deakin University, Australia)

Advanced Techniques for Knowledge Engineering and Innovative Applications

This book is exceptional in the sense that it provides an introduction to law in general rather than the law of one specific jurisdiction, and it presents a unique way of looking at legal education. It is crucial for lawyers to be aware of the different ways in which societal problems can be solved and to be able to discuss the advantages and disadvantages of different legal solutions. In this respect, being a lawyer involves being able to reason like a lawyer, even more than having detailed knowledge of particular sets of rules. Introduction to Law reflects this view by focusing on the functions of rules and on ways of arguing the relative qualities of alternative legal solutions. Where 'positive' law is discussed, the emphasis is on the legal questions that must be addressed by a field of law and on the different solutions which have been adopted by, for instance, the common law and civil law tradition. The law of specific jurisdictions is discussed to illustrate possible answers to questions such as when the existence of a valid contract is assumed.

Introduction to Psychological Assessment in the South African Context

This revised edition draws on years of lecturing experience and feedback from students. The result is a popular, lively and accessible book which offers an improved and reader-friendly introduction to the art of clear thinking. Developing and applying critical reasoning skills is globally recognised as a basic competency, like reading and writing. Critical thinkers who think for themselves are the key role players in a free and democratic society. Several up-to-date and new examples from major South African socio-political events from the past few years are given, such as the Zuma trial, political conflict, race relations, and xenophobia. Other new examples are based on events that took place in the rest of Africa and the world. New exercises are drawn from newspapers, advertisements, political speeches, literary works, the Internet, and debates about xenophobic violence, crime, the death penalty, abortion, euthanasia, inequality, and health care. Numerous activities lead readers to practise critical reasoning skills. The book is valuable to students of Philosophy but also for those studying Communication Science, Development Studies, Health Care, Law, English Studies, Medical Ethics, Political Science, Psychology and Public Administration.

Criminal Procedure Handbook

Organized topically rather than historically, this book provides an excellent introduction to the subject of African Philosophy. Samuel Oluoch Imbo synthesizes the ideas of key African philosophers into an accessible narrative. The author

focuses on five central questions: What are the definitions of African philosophy? Is ethno-philosophy really philosophy? What are the dangers of an African philosophy that claims to be 'unique'? Can African philosophy be done in foreign languages such as English and French? Are there useful ways to make connections between African philosophy, African American philosophy, and women's studies? By making cross-disciplinary and transnational connections, Imbo stakes out an important place for African philosophy. Imbo's book is an invaluable introduction to this dynamic and growing area of study.
